## Education

|   |                                      |
|---|--------------------------------------|
| <b>Stanford University</b><br><i>M.S. in Mechanical Engineering – Robotics and Kinematics Track, Overall GPA: 4.0/4.0</i>         | Sept 2024 – Present<br>Stanford, CA  |
| <b>University of Illinois at Urbana-Champaign</b><br><i>B.S. in Computer Engineering, Summa cum laude, Overall GPA: 3.97/4.00</i> | Aug 2020 – May 2024<br>Champaign, IL |

- Bruce C. Mather Memorial ECE Scholarship (2022-2023, 1 of 2 recipients annually)
- Ernest A. Tollie Memorial Scholarship (2023-2024, 1 of 3 recipients annually)
- Grainger Best Overall Project Award, Senior Design Hall of Fame (12/2023)

## Working Experience

|  |                                |
|--|--------------------------------|
| <b>Manifold Technology Holdings (Shenzhen) Co., Ltd</b><br><i>Computer Vision Research Intern   Project details are confidential</i>   | Jun 2025 – Sept 2025<br>Remote |
| <ul style="list-style-type: none"><li>• Independently built a stereo-vision data collection and evaluation pipeline, capturing image data for <b>3D point-cloud reconstruction</b>.</li><li>• Generated point clouds using an open-source algorithm based on a <b>Transformer</b> architecture, performed runtime and accuracy-error analysis, and validated results with a laser rangefinder</li><li>• Analyzed the <b>computational complexity</b> of different 3D reconstruction algorithms and evaluated their deployment feasibility on <b>resource-constrained platforms</b> (e.g., mobile or edge-computing devices).</li></ul> |                                |

## Research Experience

|  |                                     |
|--|-------------------------------------|
| <b>GRaD-Nav/GRaD-Nav++</b> : (Efficiently Learning/VLM Enabled) Visual Drone Navigation with Gaussian Radiance Fields and Differentiable Dynamics<br><i>Multi-Robot System Lab, Advisor: Prof. Mac Schwager</i>  | Jan 2025 – Nov 2025<br>Stanford, CA |
| <ul style="list-style-type: none"><li>• Developed GRaD-Nav, an <b>end-to-end</b> actor-critic-based <b>Differentiable Deep Reinforcement Learning</b> (DDRL) framework that integrates <b>3D Gaussian Splatting (3DGS)</b> with differentiable UAV dynamics to enable vision-based drone navigation. Subsequently proposed a lightweight <b>VLA + MoE</b> architecture to support natural-language-driven flight control.</li><li>• Replaced the original pretrained <b>SqueezeNet</b> vision module with an <b>asynchronously</b> executed pretrained <b>CLIP</b> vision-language matching component, and introduced a <b><math>\beta</math>-VAE-based Context Encoding Network (CENet)</b>. This significantly improved UAV adaptability in unseen environments, increasing experimental success rates by roughly 50%.</li><li>• Employed a <b>Mixture-of-Experts (MoE)</b> policy network where expert selection enables task generalization and environmental adaptation. In <b>task-generalization evaluation</b>, achieved 83%/75% success rates on seen/unseen tasks in simulation and 67%/50% in real-world tests. In <b>environment-adaptation evaluation</b>, achieved 81%/67% success rates in simulation/real-world testing.</li></ul> |                                     |

|   |                                     |
|---|-------------------------------------|
| <b>Hierarchical Imitation Learning for Bimanual Human-Robot Collaboration</b><br><i>ARMLab, Advisor: Monroe Kennedy</i>   | Mar 2025 – Jun 2025<br>Stanford, CA |
| <ul style="list-style-type: none"><li>• Built an <b>end-to-end</b> imitation learning system enabling human–robot collaboration for asymmetric two-handed manipulation tasks (e.g., grasping, handing over).</li><li>• Collected synchronized human demonstrations using a <b>Zed Camera + Rokoko Glove</b>, extracting 21 hand-joint keypoints for model training.</li><li>• Enabled prediction of <b>7-DOF virtual proprioception + gripper</b> state from human hand poses, enhancing the robot’s self-state awareness.</li><li>• Designed a two-stage imitation learning architecture: <b>Stage 1</b> predicts smoothed human hand-motion trajectories from glove inputs; <b>Stage 2</b> outputs robot control actions using scene semantic segmentation, virtual proprioception, and the predicted trajectories.</li></ul> |                                     |

## Project Experience

|   |                      |
|---|----------------------|
| Vision-Based Picking-and-Place System   <i>Python, PyBullet, Pytorch</i>  | Sept 2024 – Dec 2024 |
| <ul style="list-style-type: none"><li>Utilized <b>U-Net</b> for object segmentation, applied the <b>Iterative Closest Point (ICP)</b> algorithm for pose estimation, and implemented <b>inverse kinematics (IK)</b> for grasp planning, enhancing the robot's perception and grasping accuracy for more stable and efficient autonomous operations.</li><li>Pioneered implementation of Spatial Action Map to train an end-to-end grasping algorithm, improving accuracy in recognizing unseen objects by <b>32.8%</b> while reducing algorithm memory by <b>10%</b>.</li></ul>                                     |                      |
| Wheel-Legged Balancing Robot   Control Engineer ( <a href="#">Development Log</a> )   <i>C++, MatLab</i>  | Aug 2023 – Jan 2024  |
| <ul style="list-style-type: none"><li>Conducted <b>classical mechanics analysis</b> to establish the physics and dynamical model for the robot movement.</li><li>Applied <b>linear quadratic regulator (LQR)</b> algorithm for wheel control, enabling self-balancing.</li><li>Leveraged <b>virtual model control (VMC)</b> algorithms to control the leg motion, making the robot have adaptive suspension and keeping the robot level even with the difference in leg heights.</li><li>Simulated robot motion in <b>Matlab (Simulink)</b> and implemented the control system in C++ for hybrid testing.</li></ul> |                      |

## Robotics Club Experience

|  |                            |
|--|----------------------------|
| IRM (Illini RoboMaster)  | Dec 2021 – Aug 2024        |
| <i>Vice-Captain, Embedded Team, Student Organization (Group size: 15)</i>  | <i>Champaign, Illinois</i> |
| <ul style="list-style-type: none"><li>Trained new employees and held weekly R&amp;D meetings to synchronize development progress across departments.</li><li>Designed and implemented a <b>PID + feedforward controller</b> in C++ to ensure that the motor can generate sufficient torque when facing different kinds of resistance.</li><li>Implemented drivers for various types of motors (Motor 3508, Motor 4310, Motor 2006, Motor 6020, etc.) and encapsulated the relay, remote controller, keyboard, and laser functions using C++.</li><li>Designed a <b>dart-system</b> gimbal for the “Hero” robot using springs and wire rails for precise 11m and 20m shots.</li></ul> |                            |

## Awards & Certificates

- Standard Confrontation 2nd Runner Up, Robomaster 2023 University League North America. (Top 3%)
- Standard Confrontation 3rd Runner Up, Robomaster 2022 University League North America. (Top 5%)

## Technical Skills

Python, C++, ROS2, Matlab, C, x86 Assembly, System Verilog, Java
